## TPCE276-10R

PCI Express x1 Carrier for one XMC module, +12V Power Supply from PCIe Connector, 12V VPWR, J14 I/O, J16 I/O, JTAG connections to XMC module via 10-pin header

## TPCE276-11R

PCI Express x1 Carrier for one XMC module, +12V Power Supply from PCIe Connector, 5V VPWR, J14 I/O, J16 I/O, JTAG connections to XMC module via 10-pin header

## TPCE276-20R

PCI Express x1 Carrier for one XMC module, +12V power supply from external PCIe graphics power connector used (cable adapter enclosed in order), 12V VPWR, J14 I/O, J16 I/O, JTAG connections to XMC module via 10-pin header

## TPCE276-21R

PCI Express x1 Carrier for one XMC module, +12V power supply from external PCIe graphics power connector used (cable adapter enclosed in order), 5V VPWR, J14 I/O, J16 I/O, JTAG connections to XMC module via 10-pin header

This document contains information, which is proprietary to TEWS TECHNOLOGIES GmbH. Any reproduction without written permission is forbidden.

TEWS TECHNOLOGIES GmbH has made any effort to ensure that this manual is accurate and complete. However TEWS TECHNOLOGIES GmbH reserves the right to change the product described in this document at any time without notice.

TEWS TECHNOLOGIES GmbH is not liable for any damage arising out of the application or use of the device described herein.

### Style Conventions

Hexadecimal characters are specified with prefix 0x, i.e. 0x029E (that means hexadecimal value 029E).

For signals on hardware products, an 'Active Low' is represented by the signal name with # following, i.e. IP\_RESET#.

Access terms are described as:

W	Write Only
R	Read Only
R/W	Read/Write
R/C	Read/Clear
R/S	Read/Set

# 1 Product Description

The TPCE276 is a standard height PCI Express Revision 2.0 compatible module that provides one slot for a single-width XMC module used to build modular, flexible and cost effective I/O solutions for all kinds of applications like process control, medical systems, telecommunication and traffic control.

The TPCE276 is a versatile solution to upgrade well known XMC I/O solutions to the PCI Express signalling standard.

The PCI Express x1 link from the host board to the XMC module is enhanced by a PCIe Gen2 Redriver, allowing safe operation of XMC modules on PCIe mainboards.

VPWR is selectable via order option. The TPCE276-x0R variants provide for 12V VPWR and the TPCE276-x1R order options provide 5V VPWR.

The TPCE276 supports XMC front panel I/O, and also P14 and P16 rear I/O independently.

XMC P14 rear I/O is provided through a Tyco AMPMODU System 50 0.050x0.100 flat ribbon cable connector. The I/O lines are routed differentially.

XMC P16 rear I/O is implemented through two Samtec QTH-DP 0.50mm Q Pairs® High Speed Ground Plane Socket Strip, Differential Pair connector providing access to all P16 I/O lines.

The PCIe edge card connector provides +12V and +3.3V. The TPCE276-1xR uses the +12V of the PCIe edge card connector to generate all power supply voltages for the XMC slot (+3.3V, VPWR and +12V).

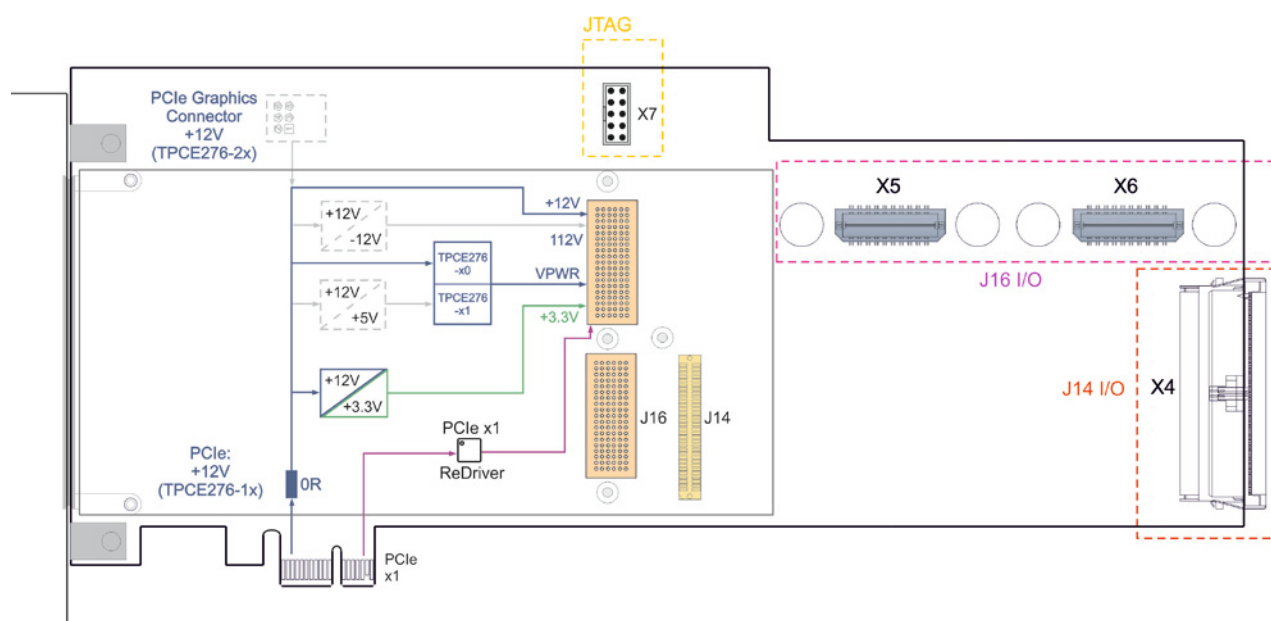

Figure 1-1 : TPCE276 Block Diagram

## 2 Technical Specification

<b>Mechanical and Electrical Interfaces</b>	
<b>PCI Express</b>	PCI Express x1, Revision 2.1 Standard Height Full Length
<b>XMC Slot</b>	ANSI/VITA 42.0-2008 (R2014) ANSI/VITA 42.3-2006 (R2014) Single-Width
<b>XMC Interface</b>	
<b>Number of XMC Slots</b>	1
<b>XMC I/O Access</b>	XMC Front Panel I/O XMC P14 Rear I/O through Tyco AMPMODU System 50 0.050x0.100 flat ribbon cable XMC P16 Rear I/O through Samtec QTH-DP 0.50mm Q Pairs® High Speed Ground Plane Socket Strip, Differential Pair connector  Maximum Current for all Rear I/O Lines is 0.5A!
<b>On Board Devices</b>	
<b>PCI Express ReDriver</b>	PI3EQX5801 (Pericom)
<b>Physical Data</b>	
<b>Power Requirements</b>	125mA maximum @ +3.3V DC 75mA maximum @ +12V DC <b>Additional power is required by the XMC Module!</b>
<b>Power Stable for XMC Slot</b>	The power supply for the XMC slot is stable approximately 20ms after the system power supply is stable.
<b>Maximum Power for XMC Slot</b>	The maximum power available for an XMC module is variant dependent. Please see chapter "Power Limits for XMC Modules" for detailed information.
<b>Temperature Range</b>	Operating    -40°C to +85°C Storage       -40°C to +85°C
<b>MTBF</b>	TPCE276-1xR: 603000 h TPCE276-2xR: 535000 h MTBF values shown are based on calculation according to MIL-HDBK-217F and MIL-HDBK-217F Notice 2; Environment: G <sub>3</sub> 20°C. The MTBF calculation is based on component FIT rates provided by the component suppliers. If FIT rates are not available, MIL-HDBK-217F and MIL-HDBK-217F Notice 2 formulas are used for FIT rate calculation.
<b>Humidity</b>	5 – 95 % non-condensing
<b>Weight</b>	TPCE276-10R: 120 g TPCE276-11R: 126 g TPCE276-20R: 122 g TPCE276-21R: 128 g

Table 2-1 : Technical Specification

## 3 Handling and Operating Instructions

### 3.1 ESD Protection

The TPCE276 is sensitive to static electricity. Packing, unpacking and all other handling of the TPCE276 has to be done in an ESD/EOS protected Area.

### 3.2 Power Limits for XMC Modules

The PCIe specification limits the power for PCIe add-in cards. These limitations have implications for the use of XMC modules. Refer to the chapter “Power Limits for XMC Modules” for details.

### 3.3 Installation of XMC Modules

Before mounting XMC Modules on the TPCE276, be sure that the system is powered off. Also, follow the installation instructions in the “XMC Interface” chapter.

### 3.4 Installation of TPCE276-2xR

For the TPCE276-2xR variants, it is imperative to always connect a PCI Express VGA power connector to the TPCE276, even if no PMC is mounted.

### 3.5 Installation of TPCE276-x0R

For the TPCE276-x0R variants, VPWR is +12V. This voltage is directly connected from the PCIe connector. The PCIe specification allows for tolerances of  $\pm 8\%$ , whereas the XMC specification allows only for  $\pm 5\%$ .

This has to be taken into consideration before plugging the XMC module onto the TPCE276-x0R.

## 4 XMC Interface

### 4.1 Power Limits for XMC Modules

The following current limits have to be taken into account when choosing the appropriate TPCE276 for the power requirements of the XMC module.

TPCE276	Voltage		Current Limits
TPCE276-1xR	3.3V		2.0 A
	VPWR	5V (TPCE276-11R)	1.2 A
		12V (TPCE276-10R)	0.5 A
	+12V		200 mA
TPCE276-2xR	3.3V		7.5 A
	VPWR	5V (TPCE276-21R)	5.0 A
		12V (TPCE276-20R)	2.1 A
	+12V		200 mA

Table 4-1 : Current Limits for the XMC Modules

### 4.2 Stable Power Supply

The power supply for the XMC slot is stable approximately 20ms after the system power supply is stable.

### 4.3 Installation of an XMC Module

The XMC modules are mounted to the TPCE276 prior to installation into the system.

If the XMC has a front panel, first remove the cover from the XMC front panel cut-out of the TPCE276. Install the XMC at an angle so that the XMC front panel penetrates the XMC front panel cut-out. Then rotate down to mate with the XMC connectors on the TPCE276. If the XMC has no front panel, simply plug in the XMC, and leave the cover in the XMC front panel cut-out of the TPCE276.

After the XMC module has been installed, it can be mounted on the TPCE276 using the mounting screws that come with the XMC module. There are four screw mounting locations, two at the XMC front panel and two at the standoffs near the XMC bus connectors.

**Before installing an XMC module, be sure that the power supply for the TPCE276 is turned off.**

**The components are Electrostatic Sensitive Devices (ESD). Use an anti-static mat connected to a wristband when handling or installing the components.**

## 5 Indicators

### 5.1 LED Indicators

The TPCE276 provides a couple of board-status LEDs as shown below.

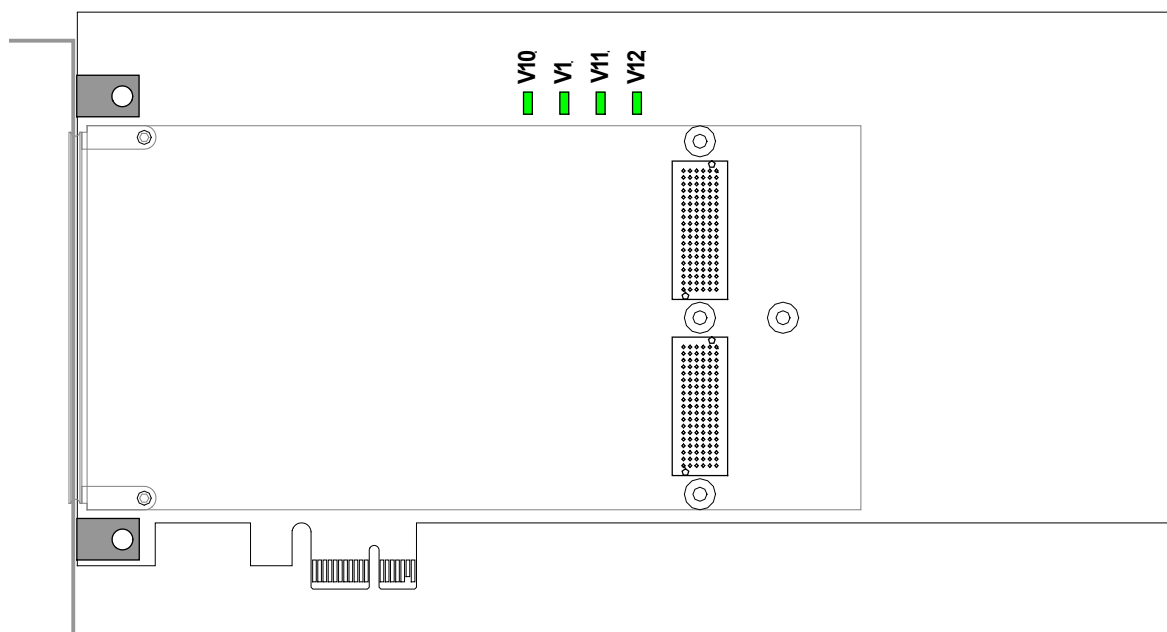

Figure 5-1 : Onboard LED Placement

LED		Color	State	Description
V10	1.5V Power Good	Green	Off	PCIe TX link is down
			On	PCIe TX link is up
V1	3.3V Power Good	Green	Off	3.3V Power Supply is not OK
			On	3.3V Power Supply is OK
V11	5.0V Power Good *)	Green	Off	5.0V Power Supply is not OK
			On	5.0V Power Supply is OK
V12	12V Power Good	Green	Off	12V Power Supply is not OK
			On	12V Power Supply is OK

Table 5-1 : Onboard LED Description

\*) Only for VPWR = 5V variants

## 6 Pin Assignments

### 6.1 XMC J15

	A	B	C	D	E	F
01	PET0p0	PET0n0	3,3V			VPWR
02	GND	GND	TRST <sup>1)</sup>	GND	GND	PERST#
03			3,3V			VPWR
04	GND	GND	TCK <sup>1)</sup>	GND	GND	
05			3,3V			VPWR
06	GND	GND	TMS <sup>1)</sup>	GND	GND	+12V
07			3,3V			VPWR
08	GND	GND	TDI <sup>1)</sup>	GND	GND	-12V
09						VPWR
10	GND	GND	TDO <sup>1)</sup>	GND	GND	GA0
11	PER0p0	PER0n0				VPWR
12	GND	GND	GA1	GND	GND	
13			3,3V_AUX <sup>2)</sup>			VPWR
14	GND	GND	GA2	GND	GND	SMCLK <sup>6)</sup>
15						VPWR
16	GND	GND	MVMRO <sup>3)</sup>	GND	GND	SMDAT <sup>6)</sup>
17						
18	GND	GND		GND	GND	
19	REFCLK+0	REFCLK-0		WAKE# <sup>4)</sup>	ROOT0# <sup>5)</sup>	

Table 6-1 : XMC J15 Pin Assignment

Notes:

- 1) JTAG lines are routed to a 10pin header onboard, not to the PCIe edge card connector
- 2) 3.3V\_AUX is connected to the PCIe edge card connector, so it is up to the mainboard to deliver this power supply. If a mainboard does not provide this power supply, it can be changed to 3.3V on the TPCE276 with a resistor.
- 3) MVMRO is set to logic high by default, prohibiting write access. It can be changed via a resistor.
- 4) WAKE# is connected to the PCIe edge card connector, so it is up to the mainboard to provide for this signal. If this is not the case, WAKE# may be separated from the mainboard via a resistor.
- 5) ROOT# is not supported; this pin is not connected on the TPCE276 by default. It can be pulled high via a resistor.
- 6) SMCLK and SMDAT are not connected to the PCIe edge card connector by default. Both signals can be connected via series resistors.

## 6.2 XMC J16
