GAP is a family of rugged servers and workstations with an aluminum construction, designed for applications that require robust and qualified MIL-GRADE equipment, suitable for operations in critical environments.

GAP-145F-S7 rugged servers feature dual socket 3rd Gen Intel® Xeon® Scalable Processors (Ice Lake), a balanced architecture that delivers built-in AI acceleration and advanced security capabilities, up to 4TB DDR4-3200 RAM, 64 lane PCIe Gen 4 and +7% higher socket-to-socket bandwidth. The integrated IPMI services support monitoring, control, and management functions sending alarm notifications in case of critical events.

GAP-145F-S7 are designed for 19" rackmounting and have a 1U chassis with a depth of 450mm.
The front I/O and rear power supply layout includes dual internal M.2 NVMe socket and a 3.5" drive bay that can host up to two removable U.2 NVMe SSD or up to three removable 2.5" SAS/ SATA SSD.
GAP-145F-S7 rugged servers host up to two OCP 3.0 compliant NIC cards with PCIe 4.0 bandwidth and a tool-less, hot-swappable design, supporting GbE / 10GbE / 25GbE / 100GbE in RJ45 or SFP version. Furthemore it can accomodate two PCIe cards.
Additional boards can be provided with a dedicated retainer kit for an optimal protection against shocks and vibrations also during transport.

GAP servers are designed to meet MIL-STD-810F for temperature and shocks, MIL-STD-167-1A for vibrations. Optionally, they can conform to MIL-STD-461 for EMI /EMC. The I/O connectors and the power supply input can be provided with MIL-GRADE connectors upon request.

All units are delivered with their inventory list to ensure configuration control and reproducibility over time. Upon request, all server configurations can run specific thermal or mechanical environmental stress test.
